

## Kimya PETG Carbon 3D Filament

The Kimya **PETG Carbon** 3D filament is a mixture of PETG and carbon fibers. The addition of carbon fibers to PETG provides high levels of mechanical performance. Thanks to its rigidity, the PETG Carbon is highly valued in the production of special parts, notably in the paramedical and automotive fields. The Kimya PETG Carbon 3D filament has the following properties:

- High rigidity
- Improve ratio between: Ease of printing / Rigidity
- Complies with the **REACH standard**

2-year ARMOR warranty.
